Response to Amendment

1. Applicant's amendment and arguments of January 3, 2006 is acknowledged and entered.
2. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bulushek in view of Manning.

Bulushek discloses a system for uniformly dispensing a fluidic substance comprising:

- at least one multi-port manifold 1 having an inlet and at least two exit ports 5 disposed substantially radially of the inlet and having a planar surface disposed in one end of the inlet substantially perpendicular to the inlet proximate the exit ports (the planar surface being defined as the passage between where the water enters the ports 5 to where the water exits the ports); and
- delivery conduits 2, each in fluid communication with one of the at least two exit ports wherein the fluidic substance flowing into the inlet impinges the planar surface and is radially dispersed as recited.

Art Unit: 3752

Buluschek does not disclose a reservoir for retaining the fluidic substance. Manning teaches an irrigation system comprising an irrigation hose 12 connected to a water reservoir via a pump to supply water to the hose 12. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Buluschek by connecting the device to a reservoir for retaining a fluidic substance via a pump as taught by Manning to provide fluid to the manifold for dispensing the fluid. Regarding claim 2, it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations and regarding claim 3, it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art.

Allowable Subject Matter

5. Claims 24-26 are allowed.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

Art Unit: 3752

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
